

Tao Yoga

1. Introduction

I'm planning to create a website for a yoga studio that will help customers learn more about the studio. I'd like to provide details of services and allow customers to book a service easily and make user experience as easy as possible.

2. Expected List of Features

- **Sticky-top Menu Bar include:**
 - **Home :** This page will show link to different retreats and services. It's also have some info about the instructors and photos.
 - **About us:** This place is for customers to read about the company
 - **Pricing:** (include 2 sections)
 - **Yoga Retreats:** this place included different retreats in details
 - **Spa:** include space services
 - **Book Now** (button with call button or text on the right)
 - **Company Logo Icon:** on the right that when click will take client to home page
 - **Contact Us:** include contact info of the company
 - **Social media logo**

3. Market Survey

Most website have the services, prices, home page, contact us, about us and booking option available. I wanted to keep the website as easy to access as possible so I preferred to have less menu options compare to some other websites.
